Hi, we promise, so we deliver – University 5.0 Hackathon

Have you heard of society 5.0? This is a future society that focuses on a sustainable, digital and citizen-centred society and complements Industry 5.0. The most important elements of such a society are skills and competences. They can be acquired in formal education or through lifelong learning. The university should play an important role in this story, don't you think? But how?

What do you think about a University 5.0 Hackathon, where we could conceptualise, plan, develop and prototype a new role for the university and higher education? Let's build the future knowledge society together. The hackathon will include creative work, fun activities, food and drink, great facilitators and Erasmus students.
